

THE MYSTERY OF THE TITANIC

by Lanthano 9/14/2023

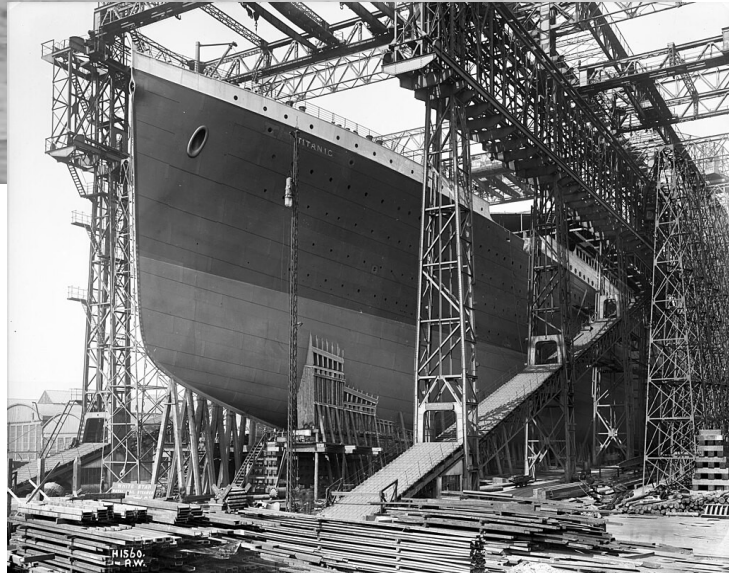

THE STORY

The RMS Titanic is quite possibly the world's most famous ship.

Construction started in March, 1909.

And while there is no clear date that can be claimed for the completion of the Titanic, it is usually agreed that the ship was finish on the 2nd of April, 1912—when sea trails began.

On the 10th of April, 1912, the Titanic set sail from Southampton England, headed for New York city².

And then, on April the 14th, at 11:40 PM, the Titanic spotted an iceberg. Evasive maneuvers were ordered, but it was too late. The starboard side of the Titanic hit the iceberg, this caused multiple holes below the waterline to open in the ship's hull.

Soon, it was clear that the Titanic was sinking—bow-first.

The Titanic was not well prepared for an emergency of this magnitude³.

With all the lifeboats aboard the Titanic, half⁴ of the 2,229⁵ passengers could have been evacuated.

In the end, only about 700 passengers survived the sinking⁶.

The Titanic's story is a tragic one, and the details are well known. But what if something else happened to the Titanic? What if things didn't happen the way we were told?

PROPHECY

The Titanic's tragic story seems to be prophesied 1898, when the book *Futility*⁷, or *The Wreck of the Titan*, was published.

Written by Morgan Robertson, it details the events of a ship—deemed unsinkable.

The Titan is described as the longest and fastest ship in the world that is also considered to be unsinkable. However, after colliding with an iceberg while traveling between America and Ireland, the ship sinks. And due to an extreme shortage of lifeboats, only 13 people survive.

The similarities between Morgan's Titan, and the real Titanic are very striking. The Titan was 800⁸ feet long, and the Titanic was 882⁹ feet long. The speed of the Morgan's boat are also similar to that of the Titanic.

THE FEDERAL BANK

JP Morgan¹⁰, an American tycoon who owned the Titanic through his company the *White Star Line*, was booked for the trip. But he canceled at the last second due to his health¹¹.

Very lucky.

Three men—Benjamin Guggenheim¹², Isa Strauss¹³, and John Jacob Astor¹⁴ were not so fortunate, and died on the Titanic.

Jacob Astor was most likely the richest man in the world at the time. With a net worth of \$87 million.

The thing that makes this ordeal suspicious is the fact that the Federal Reserve was created in 1913¹⁵. Just a little more than a year after the sinking of the Titanic.

These three men are said to have been able to stop the Federal Reserve from being formed.

If this is true, the death of these three men aboard the Titanic, made things a lot easier for the proponents of the Federal Reserve¹⁶.

ABNORMALITIES

The fact that the Titanic didn't see the iceberg until too late, seems to have raised doubts among some. Some people say that even on a night with no moon, spotting an iceberg should not have been an issue. But that is debated.

However, when the Titanic hit the iceberg at 11:40, the First Officer, William Murdoch, is believed to have had the ship turned to port (left)¹⁷, and ordered the ship into reverse.

The order to reverse the ship's propellers could be what doomed the ship. In reverse, the ship would have become much harder and slower to turn. And even if the propellers just stopped, the difficulty of turning the ship would be increased greatly.

Had Murdoch turned while maintaining a steady pace, or even just collided with the iceberg head-on, it is possible that the ship could have survived.

Another strange occurrence is the fact that Edward Smith, the captain of the Titanic¹⁸, seems to have been shocked by the Titanic's collision. He never ordered for the ship to be abandoned, and it took over an hour for the first lifeboat to be filled and lowered into the water. And even then, it was not done on Smith's orders, and it only held 28 passengers when it could have held 65.

Some say that he panicked or was traumatized, but that is forgetting the fact that he had had 40 years sea experience before the Titanic. And, he had spent 27 of those years in a command position.

SUBMARINE THEORY

There is a theory that the Titanic was sunk by a submarine¹⁹.

This theory is slightly backed up by the fact that some survivors have said that they heard up to four explosions inside the Titanic, and many saw an unidentified ship in the distance²⁰.

This unidentified ship was seen by many survivors at about five or six miles out, but it disappeared in the early morning at about 2:00.

As the theory goes, this was a submarine coming to the surface to see the damage it had caused.

This theory will probably not ever be verified due to the front of the Titanic being buried in the ocean floor about 60 feet²¹. So we will never know the damage the Titanic actually received.

The explosions, on the other hand, are said to have been the Titanic's boilers exploding. But then again, experts agree that this is very unlikely²².

THE FIRE

Some believe that an out-of-control fire doomed the great ship²³. While it is agreed that there was indeed a fire on board the Titanic, it is a stretch to say that the fire weakened the hull of the ship.

CONCLUSION

While many strange events have happened around the Titanic—from prophecies, to the explosions survivors claimed to have heard—none of them are certain.

While I cannot prove it, I have a feeling that there is something more to the story of the Titanic and why it sank.

But, in the end, we will never know.
