

EGYPT

Lanthano 6/2/2025

There are many fascinating places on earth, but Egypt may possibly be one of the most mystical and fascinating of them all. This paper will aim to discuss many topics surrounding ancient Egypt. Maybe you'll find that Egypt wasn't how you imagined it to be.

GREAT PYRAMID OF GIZA

The pyramid of Giza is a bizarre structure built for an unknown purpose. And while it is "common knowledge" that it was meant to house the body of a pharaoh. This is a myth, and no mummy has ever been found within any pyramid.

The idea was spread early on in Egyptian exploration, and although no mummies have every been found, it is accredited to tomb robbers and thieves.

There are some more sophisticated things that it might have been used for though. For example, the great pyramid of Giza seems to be set up and designed so that, if used correctly, it could generate electrical power.

This is a fringe idea, but when examined, the science checks out and everything—at least in theory when run right—works.

POWER PLANT THEORY

There is the theory that the pyramid of Giza is an ancient power plant. The theory is that it, due to its design, could generate large amounts of electrical power and store this energy for later use.

To examine this theory, I will break it into two parts; first we'll look into how it could possibly concentrate electrical energy, then we'll examine the method of which it might have generated electrical power.

ENERGY CONCENTRATION

Some argue that the pyramid of Giza could have once acted as a power plant. We will examine generative process a little later. Here we will focus on the pyramid's ability to control and concentrate electrical energy.

According to a study in 2018, the great pyramid of Giza is quite capable of focusing this electromagnetic energy in its modern day form¹.

The pyramid has the ability to direct electromagnetic energy directly under its base. It's so well designed for this task, that scientists are hoping to replicate the design in tiny particles for the purpose of controlling radio waves.

The pyramid is capable of focusing electrical power within it's interior rooms². Meaning that if power was somehow generated inside the structure, the pyramid would be able to act as a sort of battery for this power.

The great Giza pyramid was once covered completely with white Tura limestone. This stone is non-conductive. Meaning that if encased completely in Tura limestone, the pyramid could contain electrical current inside.

ROCK GENERATOR

Although it's considered fringe, there are multiple theories as to how the Giza pyramids could have been capable of producing electrical power. And when examined, the ideas hold up to scrutiny.

The bulk of the pyramid is quarried limestone from the area. This is the part of the pyramid we see today. This limestone also contains a large percentage of quartz. This stone is piezoelectric, meaning when it's placed under mechanical stress, pressure, or vibration, it can generate an electric charge.

Originally, the entire pyramid was covered in white Tura limestone. This is stone is very low in quartz, and non-conductive. It does not allow for the flow of electrical current.

VIBRATIONAL PULSE GENERATOR

This idea is largely based on the fact that the King's chamber inside the great pyramid of Giza is tuned to earth's natural frequency.

Earth typically resonates at 7.83 hertz. In Giza, it's calculated at about 8.1 hertz. The King's chamber in the great pyramid of Giza is perfectly tuned to exactly 16.2 hertz. This perfectly harmonizes with earth's natural rhythm⁴.

TESLA

Nikola Tesla was a scientist in the early 1900s who studied electricity, specifically he is known for his wireless electrical studies. He is known for multiple demonstrations where he would scatter a bunch of light bulbs across a stage, and then, while they lay around the floor, he would turn on his device and it would wirelessly cause the bulbs to light up⁵. This was his Tesla tower.

Something that isn't as well known, is the fact that Tesla was obsessed with studying the pyramids. His Tesla tower was built and based on the design of the Giza and surrounding pyramids.

It is possible that with all his research, we may have just scratched the surface of what these mysterious pyramids are.

SHAFTS

The fact that the Giza pyramid can direct electrical and radio energy is especially intriguing when you take into account this new finding.

In 2022, a team of researchers were using SAR (Synthetic Aperture Radar) radar when they discovered a series of shafts under the pyramid of Giza³. One news article reads:

A groundbreaking study using advanced radar technology has revealed a vast and intricate underground structure beneath the Pyramids of Giza. Scientists Corrado Malanga from the University of Pisa and Filippo Biondi from the University of Strathclyde used Synthetic

Aperture Radar (SAR) tomography to scan the Khafre Pyramid and found an subterranean system that extends approximately two kilometers beneath all three pyramids.

The scans (shown below) shows shaft-like cavities beneath the Giza pyramid. Some speculate that there appears to be a path that spirals down around each cylinder, but this is heavily debated and up for interpretation.

These empty spaces extend down to at least 2,130 feet, and are about 260 feet wide. This shows that an absolutely incredible level of technology was achieved by the builders of these shafts (Egyptian or not).

KINCAID'S CAVE

Kincaid's cave is a story from the early 1900s. A man named Kincaid is claimed to have discovered a cave containing Egyptian-like artifacts and mummies. Below we will dive deeper in the story and examine the claims made.

THE STORY

On April 5th, 1909, a story about a man named G. E. Kincaid was published in a newspaper called the Arizona Gazette.

Within the story, G. E. Kincaid finds a cave in the Grand Canyon that contains Egyptian-like artifacts, along with an almost Buddha looking statue. In the end, the Smithsonian are called in for help uncovering the site, and they end up taking over the project and the site is closed to the public and lost to history.

Here is a reprinting of the 1909 newspaper article¹.

Arizona Gazette, March 12, 1909 G. E. KINCAID REACHES YUMA

G. E. Kincaid of Lewiston, Idaho, arrived in Yuma after a trip from Green River, Wyoming, down the entire course of the Colorado River. He is the second man to make this journey and came alone in a small skiff, stopping at his pleasure to investigate the surrounding country. He left Green River in October having a small covered boat with oars, and carrying a fine camera, with which he secured over 700 views of the river and canyons which were unsurpassed. Mr. Kincaid says one of the most interesting features of the trip was passing through the sluiceways at Laguna dam. He made this perilous passage with only the loss of an oar.

Some interesting archaeological discoveries were unearthed and altogether the trip was of such interest that he will repeat it next winter in the company of friends.

Another article is published a month later. It details most of the story and is considered by most to be a fictional article.

Arizona Gazette, April 5, 1909 EXPLORATIONS IN GRAND CANYON

**Mysteries of Immense High
Cavern Being Brought
to Light**

JORDAN IS ENTHUSED

**Remarkable Finds Indicate
Ancient People Migrated
From Orient**

The latest news of the progress of the explorations of what is now regarded by scientists as not only the oldest archeological discovery in the United States, but one of the most

valuable in the world, which was mentioned some time ago in the Gazette, was brought to the city yesterday by G.E. Kinkaid, the explorer who found the great underground citadel of the Grand Canyon during a trip from Green River, Wyoming, down the Colorado, in a wooden boat, to Yuma, several months ago.

According to the story related to the Gazette by Mr. Kinkaid, the archeologists of the Smithsonian Institute, which is financing the expeditions, have made discoveries which almost conclusively prove that the race which inhabited this mysterious cavern, hewn in solid rock by human hands, was of oriental origin, possibly from Egypt, tracing back to Ramses. If their theories are borne out by the translation of the tablets engraved with hieroglyphics, the mystery of the prehistoric peoples of North America, their ancient arts, who they were and whence they came, will be solved. Egypt and the Nile, and Arizona and the Colorado will be linked by a historical chain running back to ages which staggers the wildest fancy of the fictionist.

A Thorough Examination

Under the direction of Prof. S. A. Jordan, the Smithsonian Institute is now prosecuting the most thorough explorations, which will be continued until the last link in the chain is forged. Nearly a mile underground, about 1480 feet below the surface, the long main passage has been delved into, to find another mammoth chamber from which radiates scores of passageways, like the spokes of a wheel.

Several hundred rooms have been discovered, reached by passageways running from the main passage, one of them having been explored for 854 feet and another 634 feet. The recent finds include articles which have never been known as native to this country, and doubtless they had their origin in the orient. War weapons, copper instruments, sharp-edged and hard as steel, indicate the high state of civilization reached by these strange people. So interested have the scientists become that preparations are being made to equip the camp for extensive studies, and the force will be increased to thirty or forty persons.

Mr. Kinkaid's Report

Mr. Kinkaid was the first white child born in Idaho and has been an explorer and hunter all his life, thirty years having been in the service of the Smithsonian Institute. Even briefly recounted, his history sounds fabulous, almost grotesque.

"First, I would impress that the cavern is nearly inaccessible. The entrance is 1,486 feet down the sheer canyon wall. It is located on government land and no visitor will be allowed there under penalty of trespass. The scientists wish to work unmolested, without fear of archeological discoveries being disturbed by curio or relic hunters. A trip there would be fruitless, and the visitor would be sent on his way. The story of how I found the cavern has been related, but in a paragraph: I was journeying down the Colorado river in a boat, alone, looking for mineral. Some forty-two miles up the river from the El Tovar Crystal canyon, I saw on the east wall, stains in the sedimentary formation about 2,000 feet above the river bed. There was no trail to this point, but I finally reached it with great difficulty. Above a shelf which hid it from view from the river, was the mouth of the cave. There are steps leading from this entrance some thirty yards to what was, at the time the cavern was inhabited, the level of the river. When I saw the chisel marks on the wall inside the entrance, I became interested, securing my gun and went in. During that trip I went back several hundred feet along the main passage till I came to the crypt in which I discovered the mummies. One of these I stood up and photographed by flashlight. I gathered a number of relics, which I carried down the Colorado to Yuma, from whence I shipped them to Washington with details of the discovery. Following this, the explorations were undertaken.

The Passages

"The main passageway is about 12 feet wide, narrowing to nine feet toward the farther end. About 57 feet from the entrance, the first side-passages branch off to the right and left, along which, on both sides, are a number of rooms about the size of ordinary living rooms of today, though some are 30 by 40 feet square. These are entered by oval-shaped doors and are ventilated by round air spaces through the walls into the passages. The walls are about three feet six inches in thickness. The passages are chiseled or hewn as straight as could be laid out by an engineer. The ceilings of many of the rooms converge to a center. The side-passages near the entrance run at a sharp angle from the main hall, but toward the rear they gradually reach a right angle in direction.

The Shrine

"Over a hundred feet from the entrance is the cross-hall, several hundred feet long, in which are found the idol, or image, of the people's god, sitting cross-legged, with a lotus flower or lily in each hand. The cast of the face is oriental, and the carving this cavern. The idol almost resembles Buddha, though the scientists are not certain as to what religious worship it represents. Taking into consideration everything found thus far, it is possible that this worship most resembles the ancient people of Tibet. Surrounding this idol are smaller images, some very beautiful in form; others crooked-necked and distorted shapes, symbolical, probably, of good and evil. There are two large cactus with protruding arms, one on each side of the dais on which the god squats. All this is carved out of hard rock resembling marble. In the opposite corner of this cross-hall were found tools of all descriptions, made of copper. These people undoubtedly knew the lost art of hardening this metal, which has been sought by chemicals for centuries without result. On a bench running around the workroom was some charcoal and other material probably used in the process. There is also slag and stuff similar to matte, showing that these ancients smelted ores, but so far no trace of where or how this was done has been discovered, nor the origin of the ore.

"Among the other finds are vases or urns and cups of copper and gold, made very artistic in design. The pottery work includes enameled ware and glazed vessels. Another passageway leads to granaries such as are found in the oriental temples. They contain seeds of various kinds. One very large storehouse has not yet been entered, as it is twelve feet high and can be reached only from above. Two copper hooks extend on the edge, which indicates that some sort of ladder was attached. These granaries are rounded, as the materials of which they are constructed, I think, is a very hard cement. A gray metal is also found in this cavern, which puzzles the scientists, for its identity has not been established. It resembles platinum. Strewn promiscuously over the floor everywhere are what people call 'cats eyes,' a yellow stone of no great value. Each one is engraved with the head of the Malay type.

The Hieroglyphics

"On all the urns, or walls over doorways, and tablets of stone which were found by the image are the mysterious hieroglyphics, the key to which the Smithsonian Institute hopes yet to discover. The engraving on the tables probably has something to do with the religion of the people. Similar hieroglyphics have been found in southern Arizona. Among the pictorial writings, only two animals are found. One is of prehistoric type.

The Crypt

"The tomb or crypt in which the mummies were found is one of the largest of the chambers, the walls slanting back at an angle of about 35 degrees. On these are tiers of mummies, each one occupying a separate hewn shelf. At the head of each is a small bench, on which is found copper cups and pieces of broken swords. Some of the mummies are

covered with clay, and all are wrapped in a bark fabric. The urns or cups on the lower tiers are crude, while as the higher shelves are reached, the urns are finer in design, showing a later stage of civilization. It is worthy of note that all the mummies examined so far have proved to be male, no children or females being buried here. This leads to the belief that this exterior section was the warriors' barracks.

"Among the discoveries no bones of animals have been found, no skins, no clothing, no bedding. Many of the rooms are bare but for water vessels. One room, about 40 by 700 feet, was probably the main dining hall, for cooking utensils are found here. What these people lived on is a problem, though it is presumed that they came south in the winter and farmed in the valleys, going back north in the summer. Upwards of 50,000 people could have lived in the caverns comfortably. One theory is that the present Indian tribes found in Arizona are descendants of the serfs or slaves of the people which inhabited the cave. Undoubtedly a good many thousands of years before the Christian era, a people lived here which reached a high stage of civilization. The chronology of human history is full of gaps. Professor Jordan is much enthused over the discoveries and believes that the find will prove of incalculable value in archeological work.

"One thing I have not spoken of, may be of interest. There is one chamber of the passageway to which is not ventilated, and when we approached it a deadly, snaky smell struck us. Our light would not penetrate the gloom, and until stronger ones are available we will not know what the chamber contains. Some say snakes, but others boo-hoo this idea and think it may contain a deadly gas or chemicals used by the ancients. No sounds are heard, but it smells snaky just the same. The whole underground installation gives one of shaky nerves the creeps. The gloom is like a weight on one's shoulders, and our flashlights and candles only make the darkness blacker. Imagination can revel in conjectures and ungodly daydreams back through the ages that have elapsed till the mind reels dizzily in space."

An Indian Legend

In connection with this story, it is notable that among the Hopi Indians the tradition is told that their ancestors once lived in an underworld in the Grand Canyon till dissension arose between the good and the bad, the people of one heart and the people of two hearts. Machetto, who was their chief, counseled them to leave the underworld, but there was no way out. The chief then caused a tree to grow up and pierce the roof of the underworld, and then the people of one heart climbed out. They tarried by Pasisvai (Red River), which is the Colorado, and grew grain and corn.

They sent out a message to the Temple of the Sun, asking the blessing of peace, good will and rain for people of one heart. That messenger never returned, but today at the Hopi villages at sundown can be seen the old men of the tribe out on the housetops gazing toward the sun, looking for the messenger. When he returns, their lands and ancient dwelling place will be restored to them. That is the tradition.

Among the engravings of animals in the cave is seen the image of a heart over the spot where it is located. The legend was learned by W.E. Rollins, the artist, during a year spent with the Hopi Indians.

There are two theories of the origin of the Egyptians. One is that they came from Asia; another that the racial cradle was in the upper Nile region. Heeren,* an Egyptologist, believed in the Indian origin of the Egyptians. The discoveries in the Grand Canyon may throw further light on human evolution and prehistoric ages.

That is the story of G. E. Kincaid. Most believe it to be a hoax, but throughout this paper, we will see if it can be verified or if it remains just an exiting tale from

history.

RESTRICTIONS

Kincaid's cave sits inside zone AQ9 of the Grand Canyon.

AQ9 is a restricted zone. You need to get a permit to be allowed inside it, another permit is required for overnight camping.

You need to inform authorities where you plan to be going, how long you plan to be in the zone, and why. Even then you may not be allowed in. They only let one or two groups in at a time².

The area of AQ9 that contains Kincaid's cave, is within the restricted air zone Dragon Corridor³. Restricted here means no flights are allowed without special permission under 10,500 feet.

Some might think that Kincaid's cave would be in a no fly zone, but because it is only a restricted air zone, those trespassing can be met with helicopters, and the helicopters are permissible because of this fact.

GRAND CANYON CAVES

Throughout the Grand Canyon there are immense cave systems. So for anyone who doubts the legitimacy of this story based on the fact that they have never heard of caves in the Grand Canyon, there are hundreds of caves within its great depths.

It is estimated that there are about 1,000 or more caves within the Grand Canyon. Of those, only around 350 have been explored⁴.

When it comes to allowing public access to the Grand Canyon caves, only one

cave is open to the public without restriction (although, as of the 4th of June 2025, it has been closed to protect the bat population).

Stanton's Cave is the only cave that is known to be physical sealed from the outside. This cave is blocked by bars and highly restricted⁵. This too, is said to protect the bat population of the cave.

And while we only know of one cave that is actually closed off to the public, it is estimated that anywhere from 10 to 50 caves have had either concrete or bars put up to seal them off from outsiders. That's 3% to 15% of all the Grand Canyon's explored caves.

The numbers are calculated using bat populations and the accessibility of the caves. They remain unverified due to the difficulties that persist. Perhaps in the coming years, more will be possible to verify.
