

THE NUCLEAR SCARE

Lanthano 9/12/2023

WHY WOULD THE GOVERNMENT LIE TO US?

This question has a very quick and simple answer to it: power or money.

Power comes from the fear these weapons create. And money comes from the fearful people.

When it comes to money, the nuclear program has racked in about 5 trillion^{A1} dollars for the government. And fear, the level of terror that was created during the cold war is widely known to have been intense—with millions afraid, and many believing us to be on the brink of nuclear war and the end of the world.

But, just because it brought in trillions for the government, and created a controllable and fearful nation, doesn't prove that nukes don't exist and that the whole thing was fabricated. This is only the motive, it doesn't prove anything.

COULD THEY FAKE THE FOOTAGE?

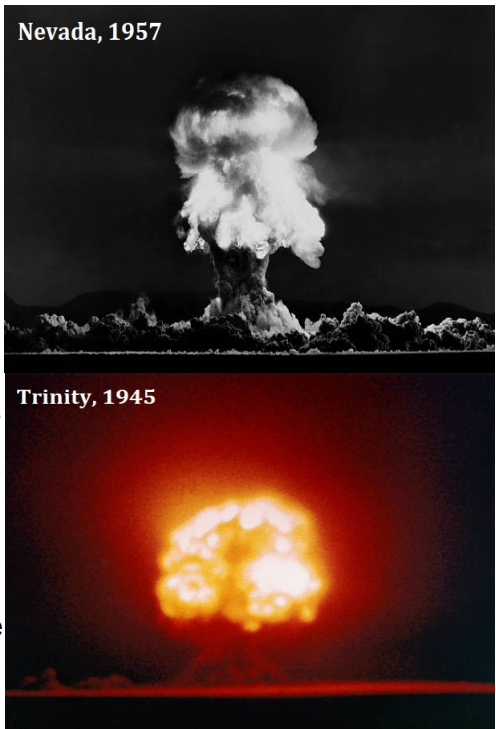

If you look at the images to the right (*Nevada, 1957* and *Trinity, 1945^{B1}*) you can see that you have absolutely no sense of proportion. You cannot calculate the size of anything your seeing.

The human mind needs something to compare things with. Something familiar that can be used to judge the size or speed of an object.

One thing almost all nuclear test footage has in common, is the complete and utter lack of proportion.

Due to this, much of the nuclear footage could have easily been faked using smaller explosions.

With nothing to show how large these blasts really are, we are left with one option: to believe what we are told. And we are told that these explosions are enormous.

THE MUSHROOM CLOUD

To most people, the mushroom cloud symbolizes nuclear power. They associate it with nuclear explosions and a fallout there afterwards. But a mushroom cloud is not special to nuclear bombs, in fact any explosion of sufficient size wants to create that shape. It's just what heat wants to do in the atmosphere.

Take a look at *Sailor Hat, 1965* on the next page. That is a dynamite blast, and you can clearly see a mushroom cloud. To the right, you can see the same mushroom cloud shape in a gasoline explosion.

The mushroom cloud is not only seen in nukes. It is a phenomenon that heat creates when large quantities of it are released into the atmosphere.

USING DYNAMITE

There are some videos and photographs with people and other objects in view. But these still don't give you any proportion.

Looking at the photograph to the lower left (*Nevada, 1955*), can you gauge how far away that explosion is?

You can't because it shows people and items right in front of the camera, you still have nothing sitting anywhere close to the explosion to estimate distance or size with.

As far as we know, that could be a dynamite explosion—as seen in the photo *Sailor Hat, 1965*. And if you compare the Nevada with Sailor Hat, you can see that they are both relatively the same.

For some reason the Nevada, 1955 photo has a very thick base compared to supposed nuclear explosions in other images and videos.

So, at least this nuclear test shot in Nevada, 1955 could have been faked using dynamite. This doesn't prove they did, it just shows that visually, the explosions are very similar.

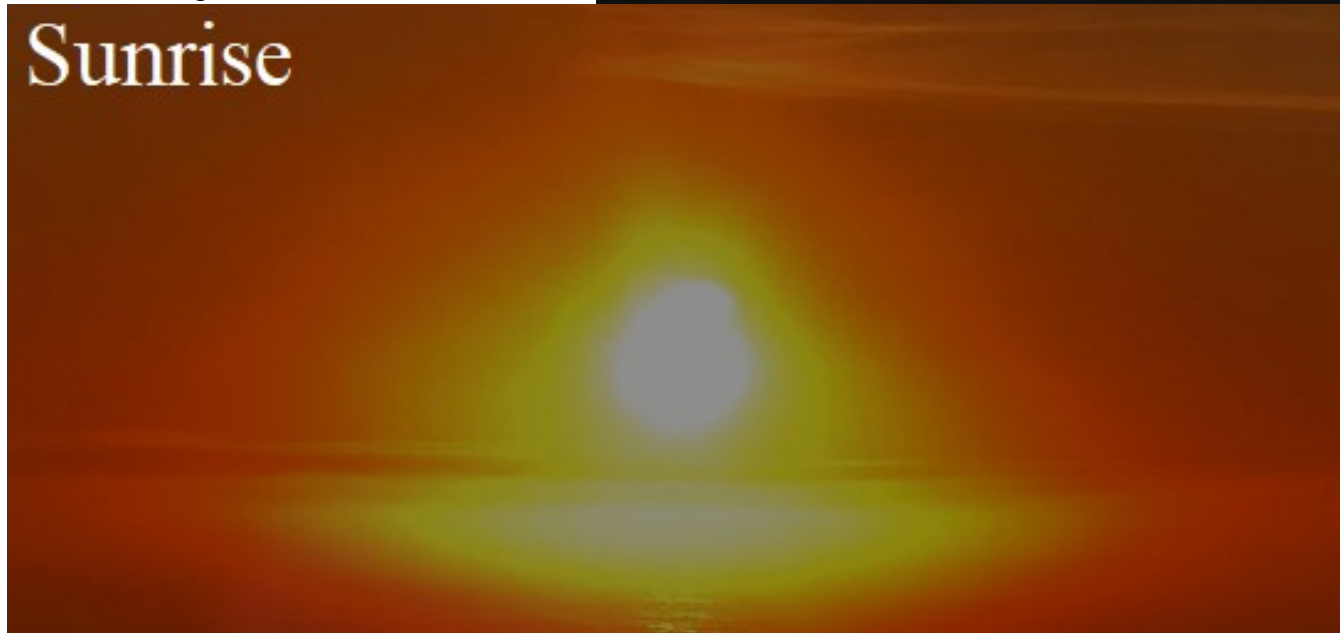

USING THE SUN

Nuclear explosions are known for a blinding light being emitted when they go off. And this can be seen in the *Dominic Fireball, 1962* footage^{B2}.

When answering how they could have faked this shot, one answer that comes up is that this could be a tight shot of a sunrise.

You have the same bright orb right above the ground, the same glare being cast on the ground, and the same intense light.

Throw in some trees at the bottom of the *Sunrise* photo, and you got yourself nuclear footage.

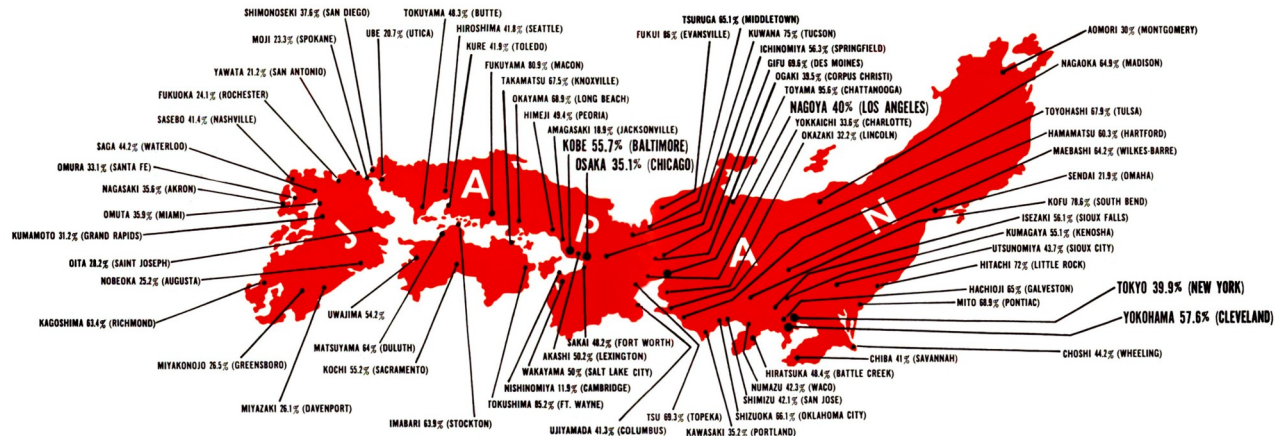

CONCLUSION

None of this proves that any of these photos were faked, this is just showing how they could have been. This is just to show that they are not concrete photographs that couldn't have been fabricated in any way.

Later, you'll get to see proof of fabrication. But not here. This is just methods that could have been used, not proof that they were.

HIROSHIMA AND NAGASAKI

During WWII, the US firebombed over 50 cities and towns before dropping the first two nukes on Hiroshima and Nagasaki. We were very good at firebombing Japan. It was nothing new by the time we supposedly nuked them. Below you can see a map of all the firebombings that took place during WWII in Japan.

This map of Japan shows the principal industrial cities which were burned out by B-29 incendiary attacks. Figures indicate what per cent of the city was destroyed. For comparison, each city is paired with U.S. city of approximately the same size.

In 1945, the US firebombed the city of Tokyo. A fire engulfed the city and burnt everything to the ground. Since this was a firebombing, brick and stone structures survived the attack.

Hiroshima and Nagasaki were nuked. A nuclear bomb was dropped on both of them. So, naturally, anything within the initial blast zone was leveled.

Now we're going to play a game. Look at the two photos below, you should be able to easily pick out Tokyo from Nagasaki—because Tokyo is the one with structures still standing.

That was a trick question, because they both have standing structures. There shouldn't be standing structures at Nagasaki. It's just fine for a firebombing, but not a nuclear blast? There shouldn't be standing structures at all.

Before I give you the answer: if you got the correct answer, at least admit to yourself that you got it right either because you recognized one of the photos, or you nailed it out of pure luck. And with that, Nagasaki is on the right. And no matter what photo you find of Nagasaki, you

will find buildings still standing in the rubble somewhere. Ground zero, random places, doesn't matter. There are structures all over the city that remain standing.

If you look up photographs of Hiroshima, you will not see many standing buildings at all. There are some, but Hiroshima was much less wealthy than Nagasaki, so there were far fewer stone structures to begin with.

THE RADIATION

According to nuclear scientists. The radiation from the Hiroshima and Nagasaki bombs should have lasted for at least 300,000 years. Yet, Hiroshima and Nagasaki were habitable days after the bombing. And as of 1947, there was no harmful levels of radiation, and people were returning to their normal lives^{C1}.

As of 2022, Nagasaki has a population of around 400,000. And Hiroshima has a population of close to 2 million^{C2}. The radiation that was supposed to last till the world ends, has mysteriously disappeared within years.

“Ah! But there was radiation!” You might think, “That proves it was nuclear.” But, if you thought this, you would be wrong.

Radiation is not a strictly nuclear phenomenon^{C3}, nor is an electromagnetic pulse. A large dynamite explosion will cause radiation.

Radiation does not prove a nuclear blast, but the lack of radiation should raise skepticism. Don't believe everything we're told, go do your own research.

CONCLUSION

If I can't prove nuclear bombs don't exist, I can prove that Nagasaki and Hiroshima were not nuked. Everything is against that idea. And if nuclear bombs are real, why were they not used on Nagasaki and Hiroshima?

This doesn't prove nukes fake, it just proves we have never used them other than testing.

PROVABLY FAKE

There are many nuclear test videos and photos that are provably fake or edited.

Lets look at them here.

IVY MIKE

Below, you can see two photos from the *Ivy Mike* test (0:05 and 0:05 (1 frame later)). One is a picture of a cloudy day, looking toward a small building and a tower.

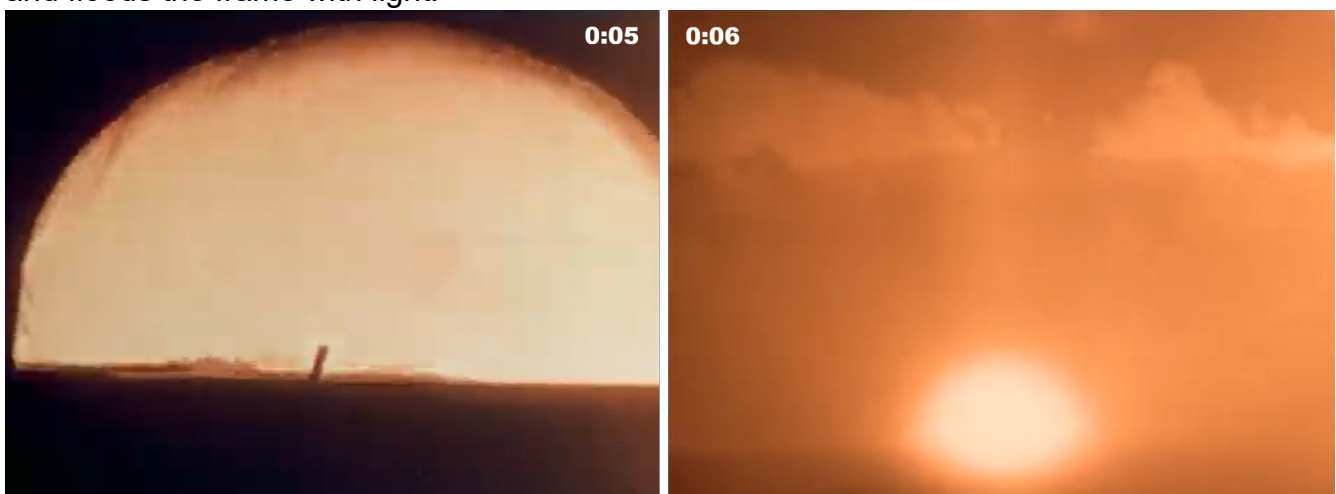

The screenshot at 0:05 shows the instant before the nuclear bomb detonates. But then something strange happens, the next frame is dark.

The frame shows something surrounded in a ring of light. And as bright as the nuke might be, this isn't possible without editing. You can't have a single dark frame like we see here.

Again, in the *Ivy Mike* nuclear test, you see multiple cuts that show video editing done very poorly (0:05 and 0:06).

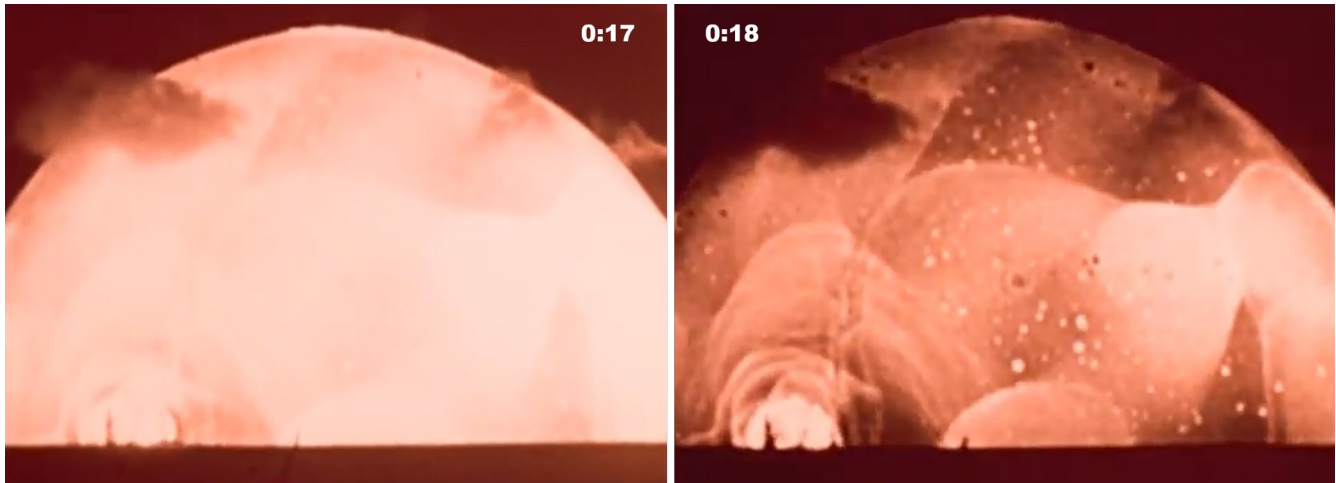

This cut is really noticeable, but the size reduction isn't show for long. It very quickly expands and floods the frame with light.

Then, a little more than 10 seconds later, you see the fireball morph in an extremely natural

way (0:17 and 0:18).

It goes from a pretty flat fireball, to something that has a lot of detail, but that doesn't quite look right.

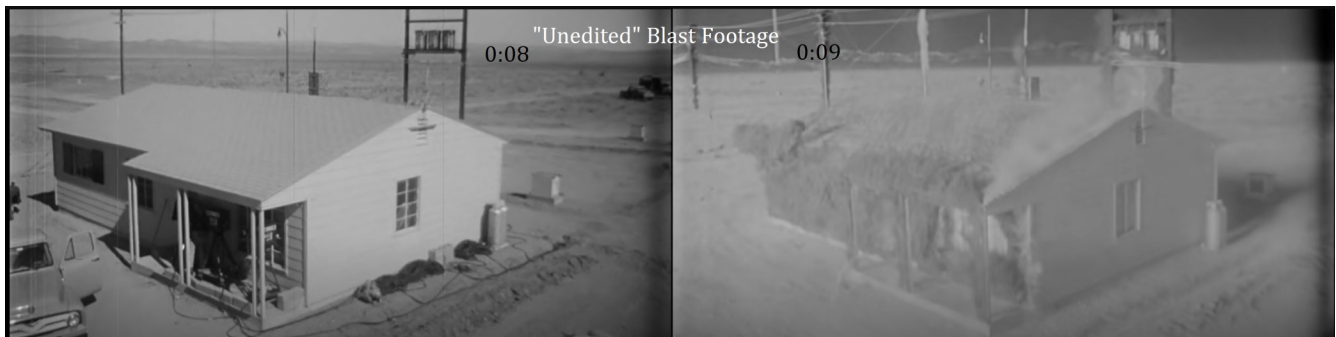

Go ahead and watch the video for yourself. You should be able to verify everything mentioned here: <https://www.youtube.com/watch?v=gE2ubIRjTNc>

These morphs and footage anomalies don't prove that nukes aren't a thing, it just shows that the footage is pure propaganda. The footage isn't trustworthy, why do we automatically trust the people in power giving it to us?

DISAPPEARING TRUCK

In this video^{D2}, you see a house get blown to bits by a nuclear blast. But if you look at the exact time the blast wave hits the house, you see something weird going on.

The truck, wires, and anything detailed, disappear from the scene as soon as the blast hits. This undoubtedly proves this video to have been edited, spliced, or completely faked.

You can watch the video here: <https://youtu.be/wgpo0qAfwDk?t=8>

MAGIC CLOUDS

In an experiment called the *Baker Event*^{D3}, a bomb was detonated at sea. The issue with the test footage is that the clouds don't move. They are in the same spot before and after the blast.

In the *After* image above, you can see some clouds that are highlighted in red. Those are clouds that you see before the blast, you see fade in advance of the blast, and then reappear after the blast.

This effect is especially noticeable if you look for it in the video, but it helps to look at the Before and After photos too.

This proves that the video has at the very least been tampered with, if not completely fabricated.

Watch the *Baker Event* here: <https://youtu.be/5JMfkMQXybM?t=69>

CONCLUSION

Some of the nuclear test footage is provably fabricated. And why would they fabricate these videos unless they needed to?

While this doesn't prove that nukes don't exist either, it certainly lends credence to that idea.

THE WITNESSES

Many tests were done with people there to witness the process. And this makes people believe that nukes must be real. After all, if you have hundreds of people over many years, witnessing nuclear explosions, and they don't think there fake, they must be real.

Now don't get upset, I am not calling these people liars or claiming that they were all in on it. In fact, I think that there is a way that they could witness a complete fabrication, and still believe that they saw the real deal. I don't think the witnesses are liars, I think their just deceived.

THE PLANE GAME

Humans, if placed at a distance on a plane from an object, are not be able to accurately judge it's distance, speed, or size. If it's dark, this effect is made even greater. As said before, people need familiar objects to use when it comes to guessing the size or speed of another object. And when those are removed, we are left with very little ability to estimate anything about an object.

All the nuclear tests that were done with witnesses, had everyone miles away from the explosion, on a flat plane (typically a flat desert), and some tests were even done at night.

This is the perfect way to disorient a person and make them unable to gauge the size of what they are witnessing. Making it possible to confuse them with a closer, smaller dynamite explosion.

Remember that a dynamite explosion is nothing to laugh at, it would be absolutely terrifying and enormous. And given human nature, witnesses would likely exaggerate the bombs size.

DYNAMITE

After the US agreed with the Russians to stop nuclear testing, they switched seamlessly over to using dynamite.

The US detonated 500 tons of dynamite to test the effects of a nuclear blast of their war ships—operation *Sailor Hat* in 1965^{E1}.

This blast was powerful enough to blow down concrete buildings. Ships placed at 800 feet away from the blast received significant damage, and the blast wave extended much further^{E2}.

The first thing you think of when you see an explosion this big is: nuclear.

And just in case your wondering, Operation *Sailor Hat* left a 34 foot wide, 17 foot deep crater in rock. *Trinity*, left 260 foot wide, 4.7 foot deep crater in desert sand^{E3}.

There are many other times that TNT blasts have resembled nuclear blasts. In 1945, right before the *Trinity* test the US government set up a little more than 100 tons of TNT^{E4}. For comparative purposes. The blast was seen 60 miles away, and the explosion resembled that of a nuclear bomb.

THE BLINDING LIGHT

The nuclear bomb is known for emitting a blinding flash. And while this could be achieved by

burning certain chemicals, it largely would not be necessary.

Most eyewitnesses did not see a blinding flash. They were told to turn around, cover their eyes, and sometimes they were given protective goggles.

For the most part, no blinding flash would be necessary. People either wouldn't see it, or they would, and even then they would be wearing protective glasses.

CONCLUSION

Once again, this is not proof of any deception, this is merely how things could have been done.

CONCLUSION

Throughout this paper, I have shown you many ways the tests could have been faked. But just because they could have been done that way, certainly doesn't mean they were.

When it comes to evidence against nuclear bombs, the faked footage, and Hiroshima and Nagasaki are the main pieces of evidence that need resolved. The other things discussed here, are just theories and ways things could have been done. They are not evidence.

In the end, I cannot (as yet) prove with certainty that nukes do not exist. I can show you that the nuclear footage is fake. And while you might ask why they would fake the footage if they actually had the bombs, just because the footage is fake, doesn't necessarily mean the bombs aren't real.

And just because we didn't use nukes on Hiroshima and Nagasaki, doesn't mean we don't have them. But it should absolutely make you wonder.

Whether nuclear weapons exist or not, we can trust God. He is in control, and will not allow the earth to perish until His judgment comes. I thank God that I have been given a questioning spirit. It is right to test things, to see if they be true. God is truth and in Him there is no lies, our goal should be finding truth and exposing lies.

Praise God, for He is worthy!

“If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him.”

James 1:5

“And ye shall hear of wars and rumours of wars: see that ye be not troubled: for all these things must come to pass, but the end is not yet.”

Matthew 24:6
